- save your day
- products for clean shopping and working
- medical parts
- request the catalog: info@aboutjell.de

disinfectant dispenser

HYGGYmask and other medical products from JELL helps spread reduce viruses. Bearer of masks and their surroundings are effectively protected. HYGGYmask are made of special plastic manufactured, durable and light disinfectable.

JELL

Automotive

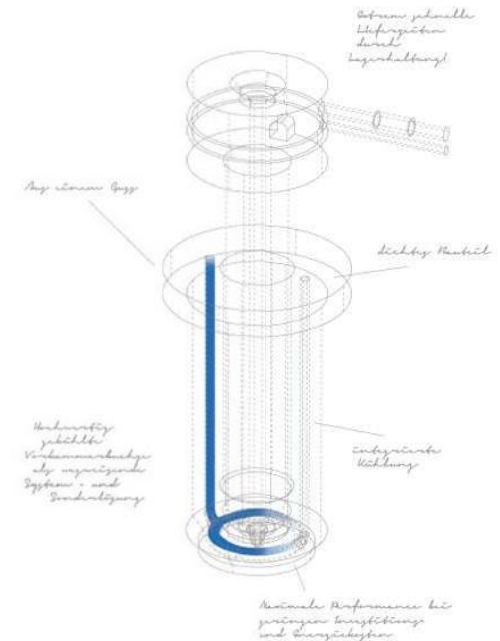

- metal and plastic parts
- manufacturing on demand
- modern system without stock

Spare parts. New parts. Special one-offs. Our modern system and state of the art technologies create the basis for fast deliveries, high quality and design only for YOU. Send your ideas. Tell us your product requirements. anfrage@aboutjell.de

blueffect® – Gate bushing

- energy saving with cooling channel
- 10 times faster delivery time
- highest quality increase through 3D printing technology
- significantly reducing production times in plastic injection molding

JELL

JELL – Service Chain

JELL

Founding date, Legal form, Business model, Industry

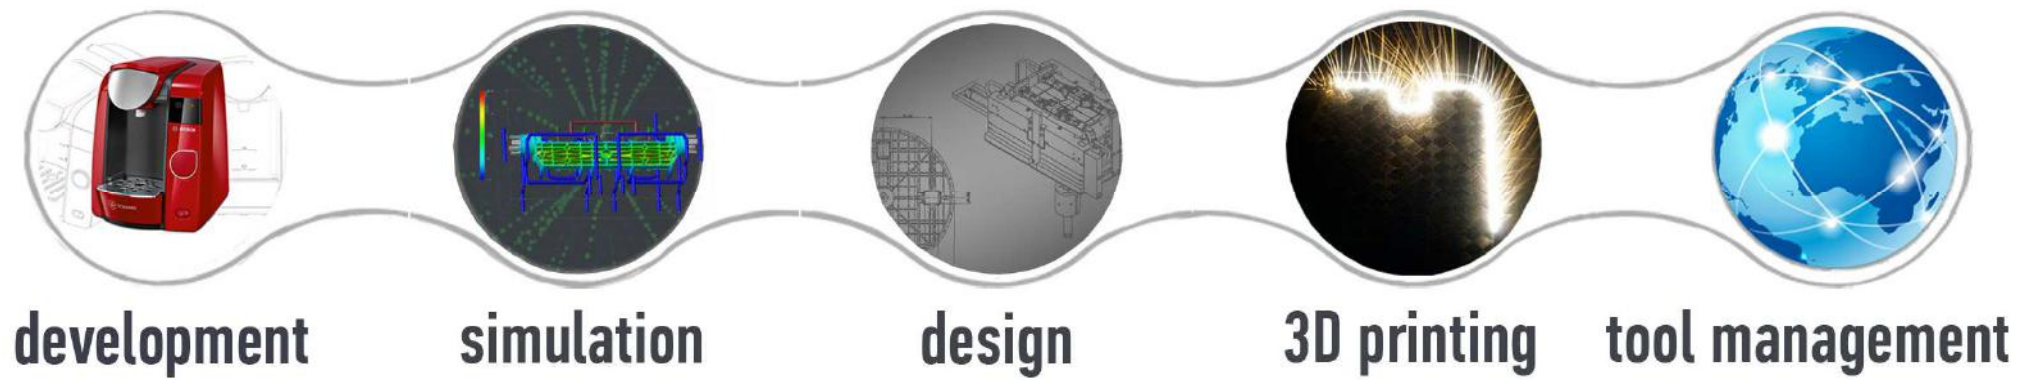

Founding date: 01.01.1987

Legal form: GmbH & Co. KG

Business model: We present ourselves on the market, mainly in the B2B area, as a service provider and expert for complex processes and state of the art technologies with our special expertise and company know-how.

Industry: i.a. Medical, Tool and Mold Making, Plastic Injection, Aerospace, Automotive, Design and Jewellery, Kitchens and Appliances, 3D Printing

Development:

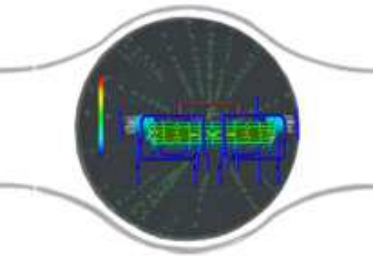

Kitchens in modern design, state-of-the-art vacuum cleaners or coffee makers, everything comes together with a first design and a sophisticated development. Experience, broad interdisciplinary knowledge and our competent team provide for the development of devices etc. for creative solutions.

If others do not know further, we come into the game.

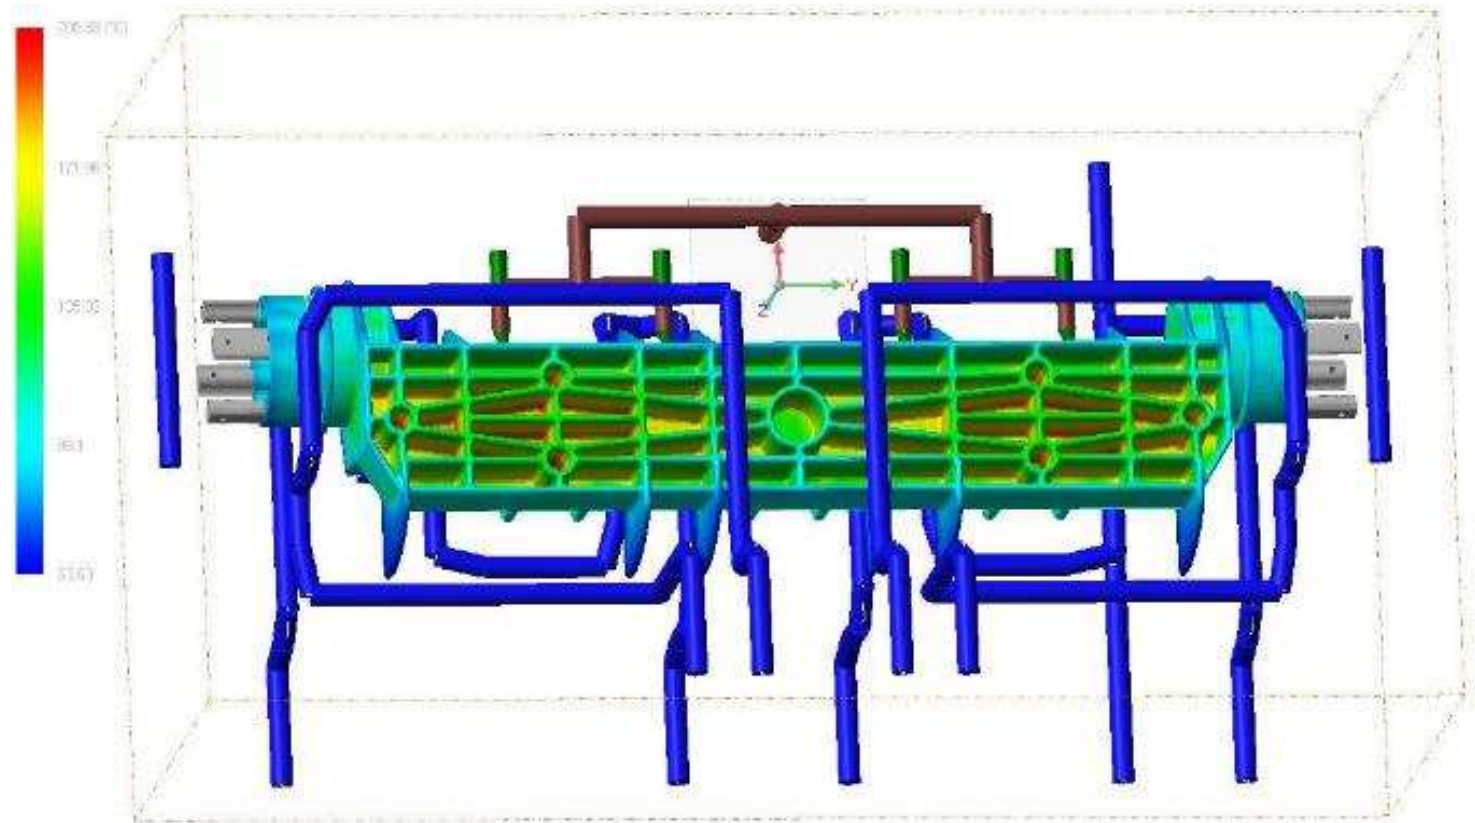

JELL

Simulation:

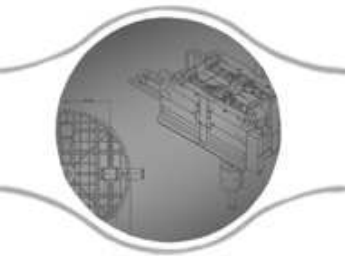

The perfect companion in plastic injection molding. We can simulate the injection molding process in advance to have a positive influence on quality and costs in development and production.

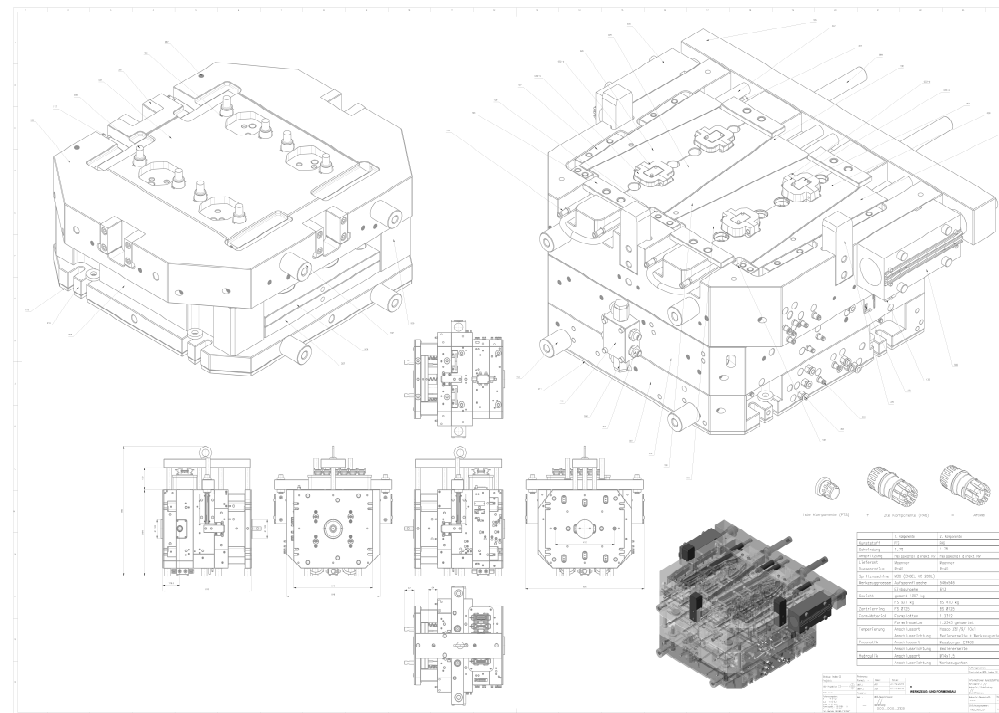

JELL

Construction:

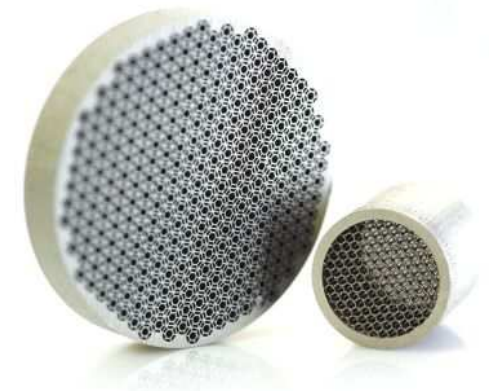

All known techniques are animated and designed in elaborate injection molding tools with the latest CAD possibilities. 30 years of experience gives us the necessary edge over the competition. The trick here is to carry out complex customer designs as simply as possible so that low-cost production is feasible. Internal specialist knowledge is an advantage here.

3D printing:

JELL is a leader in state-of-the-art 3D metal printing technology. As a pioneer of this rapidly progressing production method, components are manufactured, layer by layer, directly from the CAD model.

3D printing is the future. We want to shape it.

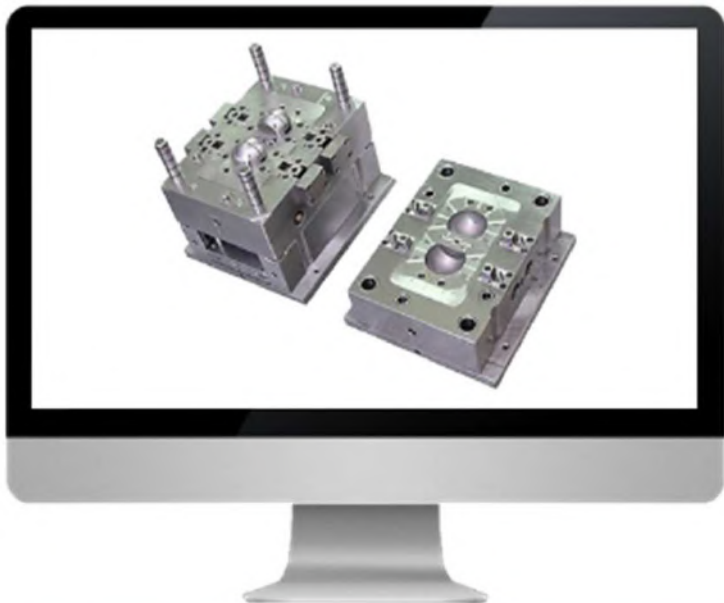

Mold Controlling:

We advise our customers in the plastics process worldwide. Mold controlling is the technical test for the customer before the start of production, but also to identify process problems. With in part over 1 million cycles per year, our service is extremely economical for our customers

Mold controlling ideally complements our service portfolio.

We accompany our customers worldwide from the first thought through to series production with the highest level of quality and flexibility.
